

## Physical Review Volume 33 (Paperback)

Filesize: 8.3 MB

### ***Reviews***

*A really wonderful book with perfect and lucid information. I actually have study and i am sure that i am going to gonna read through once more yet again in the future. I am pleased to explain how this is actually the finest ebook we have study inside my personal daily life and might be he finest book for at any time.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 Excerpt: .the value of  $dn$  from (1) and integrating, and then substituting the value of  $K$  from (2) we have  $\cosh a$  where  $n$  is the number of molecules in unit volume. Since it is the thermal agitation of the molecules which opposes the action of  $H$ , if there were no thermal agitation--i. e., if the substance were at absolute zero--the intensity of magnetization would be a maximum and we would have  $I_m = nM$ . Hence For paramagnetic substances,  $a$  is very small--much less than unity.  $\cosh a \approx 1 + \frac{a^2}{2}$  For values of  $a$  less than  $n^2$ ,  $\sinh a$  can be developed into a convergent series as follows:  $\sinh a \approx a + \frac{a^3}{6} + \frac{a^5}{120} + \dots$  For values of  $a$  less than 0.7, the terms of this series involving higher powers of  $a$  than the first are negligible, and we have  $M = \frac{2n^2 H}{3RT} = kH$ . where  $k$  is constant for constant temperature,  $k$  is the paramagnetic susceptibility and is seen to be inversely proportional to  $T$ , as found by Curie experimentally. In the case of ferromagnetic substances we have, in addition to the external field, an internal or molecular field,  $H_m$ . If this field acted alone, the intensity of magnetization would be proportional to it and we would have  $H_m = NI$ , and  $M = \frac{2n^2 H_m}{3RT} = \frac{2n^2 NI}{3RT}$  where  $N$  is the factor of proportionality. Equation (4) shows that at any given temperature  $J$  is proportional to  $a$ . For any temperature below that...
