Tata McGraw-Hill Education Pvt. Ltd., 2004. Softcover. Book Condition: New. 2nd edition. The first handbook of its kind, giving in one volume, detailed information on both the analysis and quality control of fruit and vegetable products. Authoritative, need-based and up-to-date, the book has been principally designed to meet the day-to-day requirements. Starting from the analysis of common constituents, the book covers methods of analysis of specific raw materials and containers used in processing measurement of different quality attributes, sensory evaluation, microbiological and microanalytical examinations, determination of thermal process time, and examination of specific fruit and vegetable products. The last few chapters are devoted to statistical quality control, preparation of standard solutions and tables required for day-to-day use. Sufficient theoretical information is included in each chapter before the methods are described. Each method is self-contained, easy to follow, time-tested and complete in all respects. Wherever needed, reference values or standards-PFA, ISI or FAO/WHO Codex Alimentarius are given. With its comprehensive coverage and up-to-date information, the book would be useful to public analysts, factory personnel, processors, research workers, and students of food science, food technology, agriculture and home science.
